

Sky Tunnel

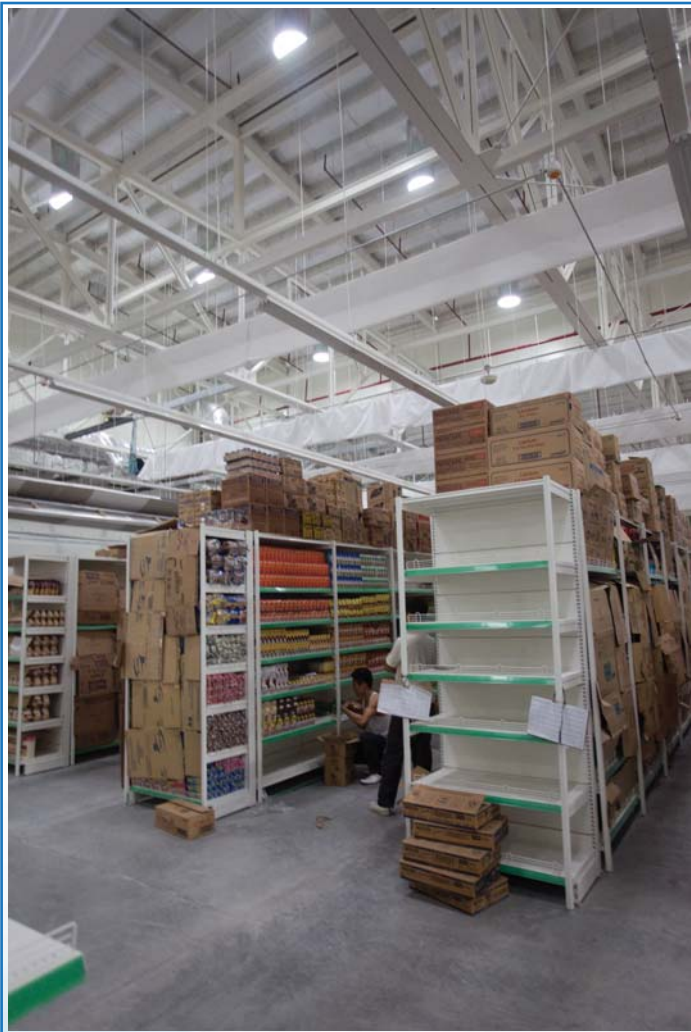

Commercial Project

Site: New JJ Supermarket, San Fernando, Pampanga, PHILIPPINES.

Task: Reduce energy consumption.

Application: General Supermarket Area and Checkouts.

Solution: 88 x 535mm Rigid98 Commercial Tube Kits.

Result:

The Supermarket is running approx 1/3 of the electrical lighting of it's other stores in the Philippines. This results in large energy savings.

As the Sky Tunnels also have no impact on the heat load of the building in comparison to electrical lighting, the air-conditioning system is also using less energy.

The objective of reducing energy consumption in the Supermarket has been achieved and the owner is very happy with the performance of the Sky Tunnels.
