

Sky Tunnel

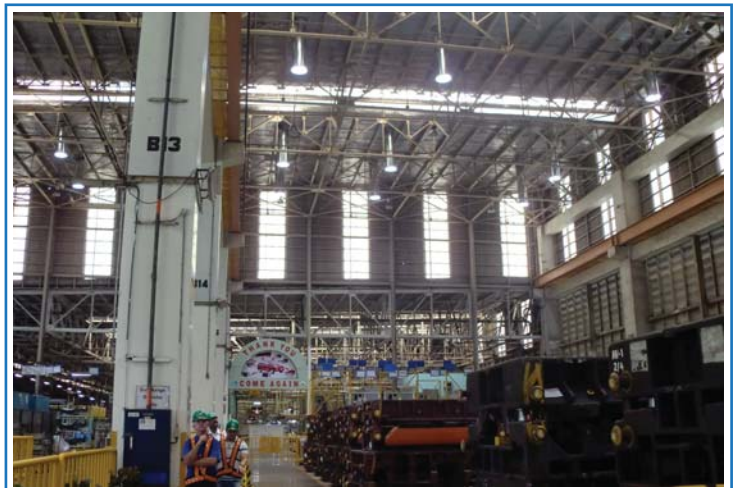

Commercial Project

Site: Toyota Motor Corporation Philippines, Sta. Rosa City, Laguna, PHILIPPINES.

Task: Reduce energy consumption.

Application: Press Shop - Production Area.

Solution: 65 x 535mm Rigid98 Commercial Tube Kits.

Result:

Despite already having fibreglass sheets installed in the roof & walls, Toyota Motor Corporation Philippines were still having to use electric lighting on a daily basis.

Since installing the Sky Tunnels there is no need to use the electric lighting in daylight hours, thus majorly reducing the energy usage in this part of the factory.

The management & environmental control officers of Toyota Philippines are very pleased with the result and have indicated they will look at implementing Sky Tunnels in other parts of the factory as their Environmental Improvement Budget allows.
